

ENVIRONMENTAL RISK ASSESSMENT AND REMEDIATION

Hydrogeologist Engineering Msc Program

2019/20 1st semester

COURSE SYLLABUS

University of Miskolc
Faculty of Earth Science and Engineering
Institute of Environmental Management

Content

1. Course description and details
2. Course syllabus
3. Final exam question list

1. Course description, details

Course Title: Environmental Risk Assessment and Remediation (Project practice)	Credits: 3																						
Type of course: compulsory/elective																							
Type (lec. / sem. / lab. / consult.) and Number of Contact Hours per Week: 2 lec.																							
The degree of <u>theoretical</u> or practical nature of the course, " course's character "13: 70 (kredit%)																							
<p>Type of Assessment (exam. / pr. mark. / other): exam.</p> <p>Students will be assessed with using the following elements.</p> <table> <tr> <td>Attendance:</td> <td>15 %</td> </tr> <tr> <td>Short quizzes</td> <td>10 %</td> </tr> <tr> <td>Midterm exam</td> <td>40 %</td> </tr> <tr> <td>Final exam</td> <td>35 %</td> </tr> <tr> <td>Total</td> <td>100%</td> </tr> </table> <p>Grading scale:</p> <table> <thead> <tr> <th>% value</th> <th>Grade</th> </tr> </thead> <tbody> <tr> <td>90 -100%</td> <td>5 (excellent)</td> </tr> <tr> <td>80 – 89%</td> <td>4 (good)</td> </tr> <tr> <td>70 - 79%</td> <td>3 (satisfactory)</td> </tr> <tr> <td>60 - 69%</td> <td>2 (pass)</td> </tr> <tr> <td>0 - 59%</td> <td>1 (failed)</td> </tr> </tbody> </table>		Attendance:	15 %	Short quizzes	10 %	Midterm exam	40 %	Final exam	35 %	Total	100%	% value	Grade	90 -100%	5 (excellent)	80 – 89%	4 (good)	70 - 79%	3 (satisfactory)	60 - 69%	2 (pass)	0 - 59%	1 (failed)
Attendance:	15 %																						
Short quizzes	10 %																						
Midterm exam	40 %																						
Final exam	35 %																						
Total	100%																						
% value	Grade																						
90 -100%	5 (excellent)																						
80 – 89%	4 (good)																						
70 - 79%	3 (satisfactory)																						
60 - 69%	2 (pass)																						
0 - 59%	1 (failed)																						
Position in Curriculum (which semester): 3rd																							
Pre-requisites (<i>if any</i>): -																							
Course Description:																							
<p>Acquired store of learning:</p> <p>The students will be familiarized with the basic concept and framework of Environmental and Human Health Risk assessment and its relationship to contaminated land remediation. The students shall be competent in reading and understanding risk assessment documentation and evaluating its correctness. They will be able to work together with other field specialists in a risk assessor team. They will get a brief introduction to remediation practices and their design and the European practice of remediation planning and monitoring.</p> <p>The short curriculum of the subject:</p> <p>History of Risk Assessment, principles and background of RA methodology, Overview of risk related terminology and definitions, Elements of HHRA methodology, Problem formulation, Exposure assessment, Toxicity assessment, Risk Characterization, Risk assessment and its role in site remediation, Risk interpretation, EU legislation and practice of RA methods, legal background, various applications of RA methods, risk based target value and its determination, Case studies.</p> <p>Practical work: Hands-on activities of simple case-study problems.</p>																							
The 3-5 most important compulsory, or recommended literature (textbook, book) resources:																							
<ul style="list-style-type: none"> • CARACAS (1998): Risk Assessment for Contaminated Sites in Europe, Volume 1: Scientific Basis; LQM Press, Nottingham, UK • USEPA, (1986): Guidelines for Carcinogen Risk Assessment. 51 Federal Register 33992. • Vegter, J.J. (2001): A Risk-Based Land Management Approach; Land Contamination and Reclamation, Vol. 9, No. 1, Richmond, UK 																							

- Twardowska I., Allen H. E., Haggblom M. M, Stefaniak S.: Valiable methods of soil and water pollution monitoring, protection and remediation, Springer, 2006.
- Health Canada (1993): Human Health Risk Assessment of Chemicals from Contaminated Sites, Volume 1 and 2.: Risk Assessment Guidance Manual; Ottawa, ON.
- Covello, V. – Mumpower, J. (1985): Risk Analysis and Management: A Historical Perspective, Risk Analysis, Vol. 5, No. 2
- CLARINET and NICOLE (2001): The Sustainable Management and Remediation of Contaminated Land, Special Edition of Land Contamination and Reclamation, Editors: Bardos, P. and Lewis, A., Richmond, UK.

Competencies to evolve (see Appendix 1):

T1, T3, K2, K4, K5, K10, F1, F4

Responsible Instructor (*name, position, scientific degree*):

Tamás Madarász Dr., associate professor, PhD

Other Faculty Member(s) Involved in Teaching, if any (*name, position, scientific degree*):

2. Course syllabus

Environmental Risk Assessment and Remediation
2019/2020. I. semester
Hydrogeology & Environmental Engineering MSc

Date	planned topic	Assignment
September 9	Introduction of course material, syllabus	
September 16	Risk definition, concepts of risk, risk assessment, risk management, risk factors, SPR concept	Student presentations on major industrial accidents, introduction, environmental effects and risk
September 23	Report on major Industrial accidents and its env. impacts – individual assignment cases	
September 30	Human Health Risk Assessment methodology intro and Human Health Risk Assessment methodology 1. Problem formulation	Conceptual site model development
October 7	Human Health Risk Assessment methodology 2. Exposure assessment	Excercise – exposure assessment
October 14	Human Health Risk Assessment methodology 3. Toxicity assessment	Toxicological databases – onlince excercie
October 21	Human Health Risk Assessment methodology 4. Risk Estimation	Risk 5 software application
October 28	<i>Mid-term exam</i>	
November 4	Contaminated site remediation, concepts, classification of remediation methods, site investigation	<i>Site investigation assignment</i>
November 11	Remediation methods – principles, classifications, in situ remediation technics	<i>Project development case study</i>
November 18	Remediation methods – principles, classifications, in situ remediation technics 2	<i>Project development case study</i>
November 25	Remediation methods – principles, classifications, in situ remediation technics 3	<i>Project development case study</i>
December 2	Report on development project	
December 9	Final course examination	

3, List of final exam questions

1. Definition of a contaminated site
2. Introduce a casestudy of an industrial accident with global significance in environmental awareness, introduce the event and its environmental impacts
3. The task flow of contaminated site remediation
4. Conceptual site model – elements, significance,
5. Site remediation conventional and innovative methods in investigation
6. Physical and chemical properties of pollutants, - movement of contaminants under surface
7. Remediation concepts a shift in thinking – threshold value based remediation, risk based, site specific remediation
8. SPR concept – significance, elements, consequences
9. Laboratory analysis – its significance in site investigation, shift in concepts and technologies
10. Contaminant threshold value definition and significance
11. Contaminant plume dynamics, protection of environmental media
12. Risk-based remediation target value – significance, elements of definition
13. Remediation technical interventions – classification, general concept, in situ, on site, off site methods
14. Remediation methods – elimination of source
15. Remediation of methods – isolation from environment
16. Remediation methods, innovative methodologies
17. Passive and active remediation technologies
18. Monitoring principles, tools
